

I am a long haul trucker and require quick access to traffic information that doesn't divide my attention between a radio and the traffic I am driving in. XM's system provides 24 hr information continuously with just a push of one button.

NAB 04-160 is bad public policy and ignore's my right to important information crucial to the safe performance of my job. Information that can reduce idle time of my diesel engine in traffic jams. Idling that wastes my time, the country's oil, and adds to the pollution level in the cities I visit.
